

ELASTEC

Mini Platform Boat

Maintenance Boat for Small Waterways

Oil Spill Equipment | Floating Barriers | Incinerators

The Elastec Mini Platform Boat is designed for small waterways that may have limited access to entrance. Its lightweight design and tilting trailer allow manual deployment and retrieval without a boat ramp. Powered by a 55 lb thrust electric trolling motor, this platform boat can operate quietly, ideal for nature habitats or tourist areas.

The forward deck platform is removable to provide access to docks, pilings or other subsurface tasks. Davit receivers are installed on both corners of the deck opening to assist in overhead equipment handling.

Specification
